

Student feedback (MIS 331 Fall 2017) - *What did you especially like about this course?*

I really disliked the course as a whole, but Karthik was one of the best teachers I had overall.

A very conceptual class that cannot be taken passively, it forces you to apply yourself to the content

The course was great and I know I can use what I learned in my future internships and jobs.

The teacher was very caring of each individual student's learning

How much the prof cared about us just learning the material.

How when starting difficult topics he let us walk through examples to show us how to do it

I liked the course because it was new material and we learned valuable skills for the work force.

I really enjoyed the content in this course and the problem solving through SQL and ER Diagrams.

I really liked the concepts we covered. Before this class, I didn't think I was going to like coding that much and was very intimidated by it, but I've found that I really like it after taking this class.

Karthik = Jedi SQL Knight. Really like this guy. Empathetic, genuine, down-to-earth. No complaints about him.

This is my favorite course and by far the most relevant course to my major

I loved finally learning about databases and how each ER Diagram could be converted into SQL:

This course was very hands on and allowed students to practice what we were learning. The application of the material was always shown and clear.

Teacher is nice

I thought it was very helpful to get to actually apply the concepts hands-on through the use of a class database server.

Karthik was a great teacher! He kept the class fun and engaging!

This class made me glad I added MIS as a double major, it's very interesting and I can already see real world applications of it.

The course is a good introduction to MIS. I felt like I got the time to actually understand the concepts rather than being forced a ton of information quickly

I really enjoyed the material of in this course and it really interested me. This course taught me a lot about data bases and how they are used in the real world. Amazing teacher!

The environment was relaxed and very conducive to learning and working with others!

I enjoyed actually applying the concepts to real database technology! It was well done and I feel like using examples to teach the concepts have been much better than simply lecturing.

I liked that instructions are clear and powerpoints are helpful.

I liked learning such new things that pertained to what I want to do in the future.

The instructor is responsible

Student feedback (MIS 331 Fall 2017) - What did you especially like about the way this instructor taught the course?

After going through a concept once, he would go through it two more times in next lectures to make sure everyone was on the same page.

He was very interactive throughout the course

Professor Sirnivasan is a great guy and wants every student to learn as much as possible. He is fun and I can tell he cares about his students. He made sure we understood the concepts

I liked the in-class lab sessions and the fact that he uploaded the labs onto d2l for us to go through and practice after the class was over. It helped to go back through and look at them on my own.

He always took the time to make sure students understood the content. He held office hours which were very welcoming and even agreed to meet outside those times to assist students.

How the instructor was with listening to his students. He seemed to really care about our learning and success.

He tried to interact with students and get them involved as much as possible.

He remembered most students' names and would call on people. Very impressive!

thanks for a great semester karthik. you are a peach of a human being and i know you are going to go far in life. i hope i can find passion in my future work/career that you have found in teaching and MIS.

Always willing to consider feedback and listen to student's concerns

I liked that Karthik always engaged the class and not only asked for feedback, but also took our feedback seriously and more often than not implemented our suggestions.

I loved this professor and could tell he really understood the topics he was teaching us.

He would reexplain topics and has a good feel for when the class didn't understand something.

Good class I would recommend this professor to other students.

Karthik is very helpful and very open to questions. He's also approachable any time. He was willing to help with SQL

Overall, awesome course very helpful instructor always willing to lend a hand in office hours and otherwise.

He really cared about each of us and how we were understanding the material

He was good at making sure we understood things as he explained it.

Karthik is a nice guy and is generally understandable about troubles students are having in the class. I like that we worked on labs in class.

the teacher let us know in advance what we would be learning in future classes so we could prepare accordingly

I like how Karthik incorporated feedback on his site. He really cares what the students think and wants to improve his teaching. He is new to teaching and wants to make sure we can achieve high levels of understanding.

He was super knowledgeable and willing to help.

Karthik was a very nice professor.

He really cares, and goes out of his way to help!

just always open to questions and always goes the extra mile in ensuring students are actually learning the material. i have found sadly that he is one of the few professors that actually cares about his students really learning/comprehending the material.. thanks for that karthik.

The instructor brought to the classroom a lot of passion for the material, an unusual characteristic for professors. The instructor always made sure students understood the material and was flexible in helping them when they needed help.

Very understanding and helpful.

I liked that he would take time to explain if a student had questions.

Professor Srinivasan taught the course with passion and kindness, which I enjoyed.

I liked how he made it a very interactive course always make sure students understood the content and giving many examples to drive a concept home.

I really liked how much he appreciated and respected our voice and opinions. He would incorporate our feedback really well in class.

Karthik was a super nice guy and was very easy to talk to!
